

Alexandr Chumak

Senior Frontend Engineer · React, TypeScript, Next.js

ciumac.dev@gmail.com · linkedin.com/in/spumony · github.com/spumony · Chişinău, Moldova (UTC+2)

EU citizen — no sponsorship required

SUMMARY

EU citizen. Senior Frontend Engineer with 6+ years building for production in React, TypeScript and Next.js. Currently Lead Frontend Developer at Multisoft on a restaurant CRM client. Five years before that at EVCARGO, owning the design system, component library and client-side architecture. Also builds AI products solo: Prosvetum, an iOS book-summary app with a RAG mentor now in TestFlight, and Rivella, an AI sales assistant. Open to senior frontend and AI product roles across the EU. Remote, UTC+2.

EXPERIENCE

Lead Frontend Developer

Jan 2026 – Present

Multisoft, Romania (Remote)

- Only frontend engineer on a restaurant CRM platform; started the web client from zero in January 2026.
- Set the architecture and component system in Next.js and TypeScript, and wrote down the routing and frontend standards.
- Build the order, menu and reporting modules on one shared component set: dense tables, filtering, long forms.

Frontend Developer

Jan 2021 – Dec 2025

TeamArt — EVCARGO (Remote)

- Frontend of a production e-mobility logistics platform, inside a cross-functional Scrum team.
- Built and maintained the shared design system and component library, then designed the client-side architecture around them.
- Integrated REST APIs with React Query, so caching and invalidation behaved the same on every screen.
- Ran frontend code review and technical planning.

Web Developer

Aug 2019 – Dec 2020

Freelance (Remote)

- Built web apps for clients and reworked existing ones; refactored legacy interfaces in JavaScript and React.

Web Designer

Oct 2018 – Mar 2019

Exterior Security Systems, Chişinău, Moldova

- Designed web pages and marketing material in Figma, and worked in the site's HTML and CSS.

PROJECTS

Prosvetum — book summaries with an AI mentor (iOS)

v1.0.0, TestFlight

Expo SDK 56, React Native 0.85, TypeScript, Supabase (Postgres, RLS, Edge Functions), pgvector, Claude, Voyage AI

- Built the whole product alone: iOS client, database, Edge Functions and the content pipeline. 39 summaries in the catalogue. v1.0.0 is in TestFlight; the App Store listing is still ahead.
- RAG mentor: 1024-dimension Voyage embeddings in pgvector behind an HNSW index, answers streamed from Claude over SSE, AI quotas enforced server-side.
- Postgres with row-level security across 20 migrations, so the database itself decides who gets paid content. My own suite covers 43 access rules and all 43 pass.

- Built the whole product alone: LLM layer (prompts, dialogue flows, RAG over a per-tenant knowledge base, objection handling), backend, data schema, multi-tenancy and auth.
- YClients and Telegram integrations so the assistant reads free slots and creates bookings; admin panel with funnel, analytics and billing tiers; bilingual RU/EN interface.
- Deployed and running at rivella.app. No paying customers yet; onboarding the first businesses.

SKILLS

Frontend: React, TypeScript, Next.js (App Router), React Native / Expo, Tailwind CSS, TanStack Query, Zod, Vitest, Playwright

Fullstack: Node.js, PostgreSQL, Supabase (RLS, Edge Functions), Drizzle ORM, Server Components / Actions, Session auth (bcrypt), REST API design, Inngest, Sentry, Vercel

AI: RAG, Embeddings + pgvector, Vector search (HNSW), Anthropic / OpenAI SDK, Voyage AI, Streaming UX (SSE), Prompting & dialogue flows

Practice: Design systems, Cross-functional collaboration, Mentoring, Async written communication, Product / UI design (Figma)

EDUCATION

Master’s in Information Technology Technical University of Moldova	Sep 2018 – Jun 2020
Bachelor’s in Information Technology Technical University of Moldova	Sep 2015 – Jun 2018
