Chișinău, Moldova (UTC+2/+3) · **EU citizen, no visa sponsorship required** · Remote, on-site in Chișinău, or relocation within the EU · Available immediately

SUMMARY

Senior frontend engineer with commercial experience since 2019: React, TypeScript, Next.js, React Native. Strongest at data-heavy interfaces (tables, filters, long forms), design systems and the client-side data layer over REST APIs. Covers the full cycle on own products: Figma design, a NestJS backend, tests and deployment.

- **EV Cargo** (TeamArt, 2021–2025): logistics and transport CRM for a UK logistics operator, React web app and React Native mobile app.
- **Multisoft** (TeamArt, 2026): restaurant CRM, three separate apps for administrators, kitchen staff and waiters, as the only frontend engineer on the project.
- **Rivella.app** (own product, 2026): multi-tenant SaaS where an AI assistant on the Claude API answers clients in Telegram and books appointments.
- **Prosvetum** (own product, 2026): React Native iOS app with book summaries and an AI mentor, published on the App Store.
- **Profit Controller** (own product, 2026): restaurant analytics on iiko POS data, covered by 600+ automated tests.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js (App Router), TanStack Query (React Query), Axios, Tailwind CSS, design systems and component libraries

Mobile: React Native, Expo, EAS, NativeWind, App Store release

Testing: Playwright, Jest, Vitest

Backend: Node.js, NestJS, PostgreSQL, Prisma, Drizzle ORM, Supabase (Edge Functions, RLS), REST, OpenAPI / Swagger, JWT

Delivery: Git, GitHub Actions CI/CD, Docker, VPS deployment, Sentry

AI: Anthropic Claude API, tool calling, PostgreSQL full-text search, embeddings with pgvector

Process: Scrum, code review, estimation, working with designers in Figma

EXPERIENCE

TeamArt Outsourcing 02/2021 – 08/2026

Frontend Developer · outsourcing company, Chișinău / Bucharest · dedicated client teams

EV Cargo · 02/2021 – 12/2025 · UK-based logistics operator · logistics and transport CRM, web and mobile

- Developed the React/TypeScript web app in a cross-functional Scrum team.
- Built and maintained the shared design system and component library, and structured the client-side architecture around them.
- Built the REST data layer on React Query and Axios: auth token refresh, caching, pagination, filtering, cache invalidation and error handling.
- Contributed to the React Native app and cross-platform releases, including Android SDK upgrades and iOS release validation.
- Introduced Playwright end-to-end tests for critical user flows.
- Reviewed frontend code and took part in estimation and release coordination.

Multisoft · 01/2026 – 08/2026 · Romanian software vendor for hotels and restaurants · restaurant CRM

- Only frontend engineer on the project: three separate apps for restaurant administrators, kitchen staff and waiters.
- Built all three apps in Next.js/TypeScript from scratch. Designed the component system, routing structure and frontend conventions, and documented them.
- Implemented dense tables, filtering, validation and long forms over REST APIs on one shared component set.

Freelance 08/2019 – 12/2020

Web Developer · remote

- Built and maintained web applications in JavaScript, React and WordPress for small businesses; refactored legacy interfaces.

Exterior Security Systems 10/2018 – 03/2019

Web Designer · Chișinău · web page designs and marketing materials, HTML and CSS

PROJECTS

Rivella.app: AI assistant for service businesses 2026 – present

Built and deployed solo · rivella.app

- Multi-tenant SaaS: an assistant answers clients in Telegram, qualifies leads and books appointments through the YClients API.
- Next.js admin dashboard and landing page, NestJS API with Prisma and PostgreSQL, tenant-scoped data model.
- Assistant on the Anthropic Claude API: a bounded tool-calling loop over 15 tools with a validator before every reply; answers grounded in PostgreSQL full-text search over a knowledge base; hand-off to a human manager.
- 5 scheduled jobs (reminders, post-visit follow-up, no-show detection, abandoned-booking recovery, daily digest); 138 API tests in Jest; OpenAPI spec.
- GitHub Actions runs tests, builds Docker images and deploys them to a VPS.

Prosvetum: book-summary iOS app 2026

Built solo, published on the App Store in September 2026 · apps.apple.com/app/id6787093203

- React Native (Expo), TypeScript, NativeWind: book summaries with audio, quizzes, flashcards and an AI mentor.
- The TanStack Query cache is persisted to AsyncStorage.
- Supabase backend: PostgreSQL with row-level security, Edge Functions for chat, recommendations and audio delivery; AI mentor answers grounded in vector search over Voyage embeddings in pgvector.
- Error monitoring in Sentry through error boundaries; builds and App Store submission through EAS.

Profit Controller: restaurant analytics 2026

- Turns data from the iiko POS system into ranked findings, each quantified in money and backed by evidence.
- Next.js (App Router), TypeScript, Drizzle ORM, PostgreSQL, better-auth; an assistant on the Claude API explains the computed metrics.
- 600+ Vitest tests, plus integration tests and Playwright end-to-end tests, run in GitHub Actions; Docker and Caddy deployment.

EDUCATION & LANGUAGES

M.Sc. in Information Technology, Technical University of Moldova 2018 – 2020

B.Sc. in Information Technology, Technical University of Moldova 2015 – 2018
